What if every street had trees?

Trees help fight climate change. They... • Take in CO2

- Intercept stormwater
 Provide shade
- · Reduce energy usage
- · Improve mental health.

Whatif we all joined the climate

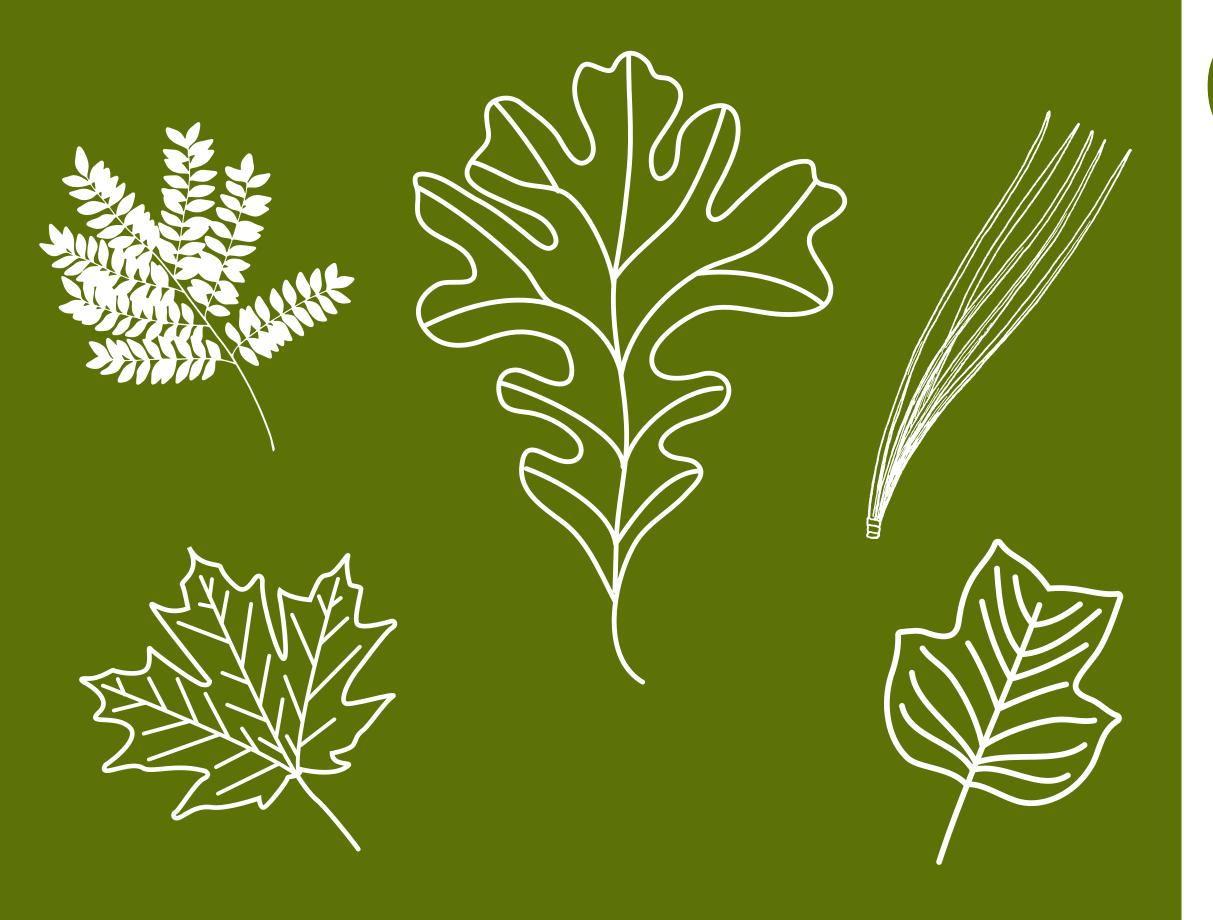

Imagine a climate resilient conversation? Georgetown.

We can imagine a better future together.

What if we could name 5 native trees?

The average American can name over 100 corporate logos and only 10 plants.

- Robin Wall Kimmerer

You can change that.

What if we drove less?

1/3 of the world's gas emissions are because of vehicles. Let's work together to make Georgetown better for biking, walking, and public transit.

What if we cared for treeslike they care for Georgetown. U5?

Imagine a climate resilient

Trees are more likely to survive when they are properly mulched and pruned.

What if we supported our local farmers?

Local food builds community, reduces resource consumption, and preserves our natural lands.

What if we all planted a tree today?

You can help maintain and build a more equitable tree canopy.

What if we had more community gardens?

Community gardens...

- · Increase fresh foods
- Support food security
- · Improve mental health
 - Provide educational opportunities for the community.

What if our yards were pollinator habitats?

Let's create pollinator friendly habitats to support local food and flowering plants.

What if we took care of our soil?

Soils provide plants with essential minerals and nutrients for them to grow.
